SPAIN

Dear Mr. HERRERA Cortes

I was glad to hear that the Mexican Chamber of Deputies approved an initiative of law for the creation of the Mexican Space Agency or AEXA.

I strongly support this act and you can forward this letter to the Mexican Chamber of Senators. I do hope that the Mexican President would accept a final positive decision.

Mexico is a large country with widespread urban areas, large agriculture and deserts. Satellites' applications such as: earth observation methodologies, communication networks and many other applications are proving to be an essential tool for increasing the progress and the growth in most of the countries of our world. I am sure that AEXA can contribute immensely to the Mexican people in many dimensions.

The Israel Space Agency is looking forward for promoting of a bilateral scientific and technological cooperation with the new born agency (when it would be established).

Respectfully yours,

Dr Zvi Kaplan
Director General
